

Vari-Green Constant Airflow Control, Integral Transducer with Pitot Tube, Product # 872985

The Constant Airflow Control is used to monitor velocity pressure in a system, automatically adjusting the fan speed to maintain a desired velocity pressure (constant CFM). This control reduces energy consumption not only by reducing the speed and the energy used by the fan, but will also reduce the amount of conditioned air that is exhausted. Recommended for use in multi-family structures, hotels and schools where demand control ventilation applications exist.

- 2-line, backlit display
- Dedicated airflow control mode
- Integral pressure transducer maintains compact form
- NEMA-4 enclosure on all components
- Pressure range of +/- 1.0 inch wg
- Intended for use with Greenheck's Vari-Green motor and Vari-Green Drive

Certifications

Performance Characteristics

No Fan Curve Available.

Construction Features

Includes	(1) Duct static probe
Includes	Vari-Green airflow control with integral pressure transducer
Includes	(1) Duct Velocity Probe
